DALLAS, TEXAS**

TREE SURVEY FIELD DATA

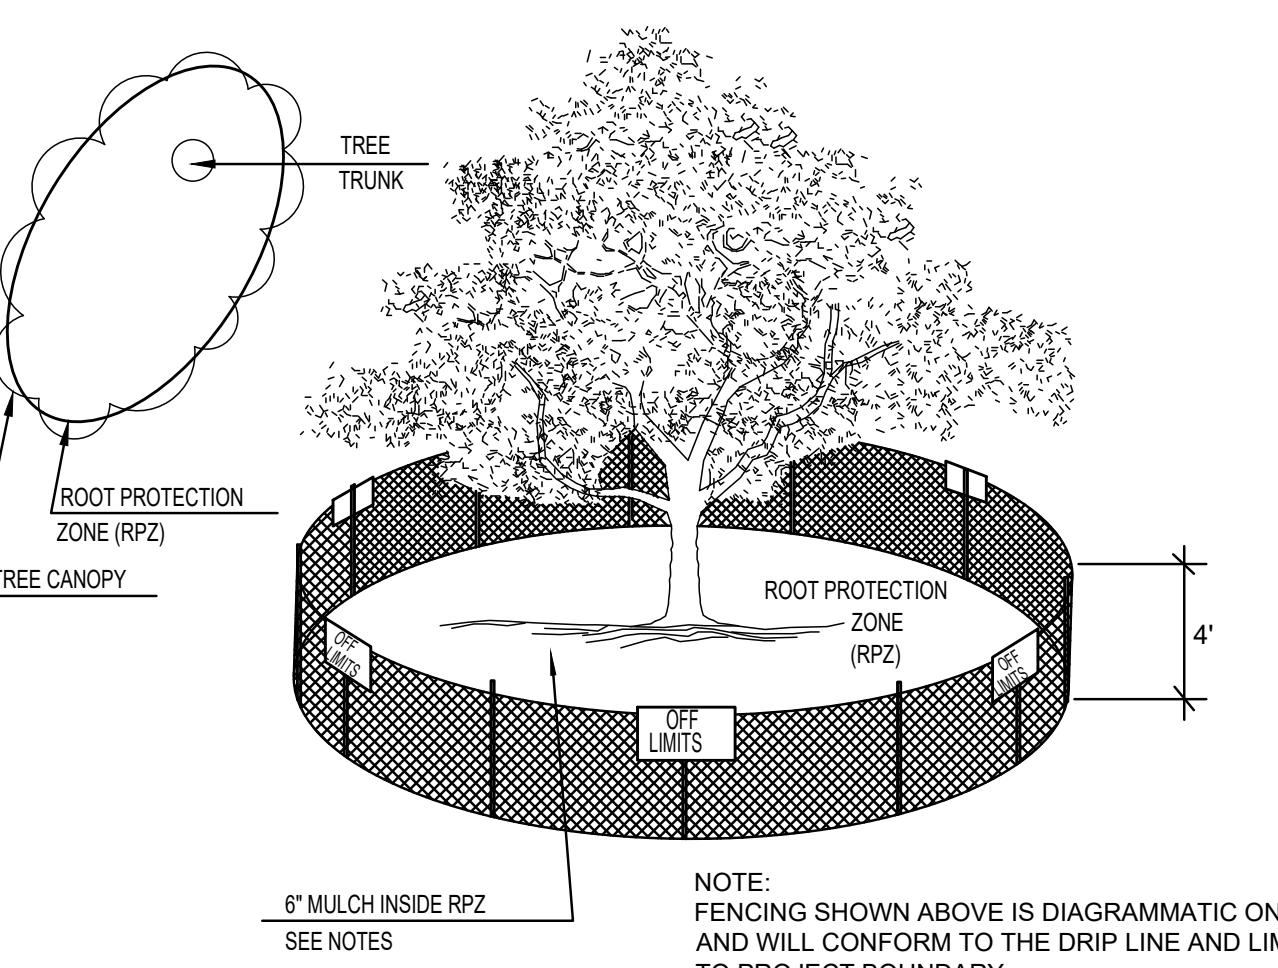

TREE SURVEY - FRIED DATA					
NO.	DIA. INCHES	SPECIES (COMMON NAME)	REMARKS	CLASS	MITIGATION / TREE VALUE
1	24	Hackberry	TO BE REMOVED	CLASS 3	9.6
2	16	Cedar	TO BE REMOVED	CLASS 2	11.2
3	16	Cottonwood	TO BE REMOVED	CLASS 3	6.4

27.2 CALIPER INCHES OF TREES TO BE MITIGATED

28 CALIPER INCHES OF TREES TO BE PLANTED BACK ON SITE
REFER TO SHEET L.2 FOR PROPOSED TREE LOCATIONS.

EXISTING TREE NOTES

- Existing trees to remain shall be protected during construction from tree structure damage and compaction of soil under and around drip line (canopy) of tree.*
 - If any root structure is damaged during adjacent excavation/construction, notify the Architect immediately. It is recommended that a licensed Arborist be secured for the treatment of any possible tree wounds.*
 - No disturbance of the soil greater than 4" shall be located closer to the tree trunk than 1/2 the distance of the drip line to the tree trunk. A minimum of 75% of the drip line and root zone shall be preserved at natural grade.*
 - Any fine grading done within the critical root zones of the protected trees must be done with light machinery such as a bobcat or light tractor. No earth moving equipment with tracks is allowed within the critical root zone of the trees.*
 - Material Storage: No materials intended for use in construction or waste materials accumulated due to excavation or demolition shall be placed within the limits of the drip line of any tree.*
 - Equipment Cleaning/Liquid Disposal: No equipment may be cleaned, toxic solutions, or other liquid chemicals shall be deposited within the limits of the drip line of a tree. This would include but not be limited to paint, oil, solvents, asphalt, concrete, mortar, primers, etc.*
 - Tree Attachments: No signs, wires or other attachments, other than those of a protective nature shall be attached to any tree.*
 - Vehicular Traffic: No vehicular and construction equipment traffic or parking is allowed within the limits of the drip line of trees.*
 - Boring of Utilities: May be permitted under protected trees in certain circumstances. The minimum length of the bore shall be the width of the tree's canopy and shall be a minimum depth of forty-eight (48") inches.*
 - Trenching: Any irrigation trenching which must be done within the critical root zone of a tree shall be dug by hand and enter the area in a radial manner.*
 - Tree Flagging: All trees to be removed from the site shall be flagged by the Contractor with bright red vinyl tape (3" width) wrapped around the main trunk at a height of four (4') feet above grade. Flagging shall be approved by Landscape Architect prior to any tree removal. Contractor shall contact Landscape Architect with 72 hour notice to schedule on-site meeting.*
 - Protective Fencing: All trees to remain, as noted on drawings, shall have protective fencing located at the tree's drip line. The protective fencing may be comprised of snow fencing, orange vinyl construction fencing, chain link fence or other similar fencing with a four (4') foot approximate height. The protective fencing will be located as indicated on the Tree Protection Detail(s).*
 - Bark Protection: In situations where a tree remains in the immediate area of intended construction, the tree shall be protected by enclosing the entire circumference of the tree's trunk with lumber encircled with wire or other means that does not damage the tree. Refer to Tree Protection Detail(s).*
 - Construction Pruning: In a case where a low hanging limb is broken during the course of construction, the Contractor shall notify the Landscape Architect immediately. In no instance shall the Contractor prune any portion of the tree. If the limb is still attached to the tree, the Contractor shall repair the limb.*
